## **IMPORTANT PRODUCT NOTICE:**

### **NEW REAGENT FORMULATION CHANGE TO BE PROVIDED IN GTI DIAGNOSTICS ELISA ASSAYS PF4 ENHANCED<sup>®</sup> and PF4 IgG<sup>™</sup>**

A formulation change to the Stopping Solution has been identified for GTI Diagnostics' ELISA-based assays. The new solution will eliminate hazards that are associated with the current reagent, as well as eliminate special chemical disposal needs.

Extensive validation testing has been performed. The new Stopping Solution does not change the product, its performance or the test procedure.

It is expected that ELISA kits containing the new Stopping Solution will be distributed when the current stock has been depleted. The new kits will be labeled with a bright pink sticker stating **“New Stopping Solution Formulation. See enclosed CD for changes”**. The Direction Insert on this CD will contain the changes highlighted in yellow.

A revised Direction Insert and MSDS will be posted on the GTI Diagnostics Website ([www.gtidiagnostics.com](http://www.gtidiagnostics.com)) approximately three (3) months before the kits with the new Stopping Solution will be available for distribution. These documents may be used to update any internal procedures you may have that may be affected.

Please contact GTI Diagnostics Technical Support, your Technical Sales Specialist or Distributor if you have any questions regarding this change.
